The concepts of bio-cultural co-constructivism capture this essential insight by insisting that the brain and culture are mutually dependent systems; both are in continuous and reciprocal interaction, simultaneously shaping and constraining each other and co-constructing developmental outcomes and potentials. Meehl made numerous contributions to clinical science and a hallmark of many of these contributions was their integrative nature.

FoundatthesebookshopsSearching-pleasewait The study of the adolescent brain is currently a burgeoning field in cognitive neuroscience. International Handbook of Suicide Prevention. Epidemiology of childhood disorders in a cross-cultural context.
