Various species can act as Lewis acids. Look how steep the beginning part of that curve is! This reaction is reversible; water can react with the imine to give us back the product. A Lewis Base donates its electron to a Lewis Acid resulting in a coordinated. Treating an aldehyde with an amine generates a compound called an imine as well as a molecule of water. Sep 10, Diels-Alder Reaction: As of now you should know that acids and bases are distinguished as two separate is done by removing one of the byproducts of the forward reaction, hence preventing the reverse reaction from occurring.
