We live in a visual age - an age of images - iconic, instant and influential. The first stunning picture of Earth from space stimulated an environmental consciousness that has grown ever since; the mushroom clouds from atomic and nuclear explosions became the ultimate symbol of death and destruction; Mercator's flat map of the Earth cemented an entire worldview.

But this is the beginning of putting science in the newspapers for the public. Someone else who played a role was Florence Nightingale. The next group of pictures that I will talk about show you something that most people are surprised to learn is a rather late arrival on the human intellectual scene: Many of these images have changed our view of ourselves and of the world around us. One thing that has happened in astronomy and the imagery associated with it, is that when you talk about a picture of a galaxy, like the Whirlpool, there is no unique picture.
